NGUYEN MINH KHOI

Network & Systems Engineer Intern

0816016304 khoinm1603@gmail.com khoinm2004.github.io Tân Hưng, TP.HCM

PROFESSIONAL SUMMARY

Final-year Information Technology student (GPA 3.22/4.0) at Nguyen Tat Thanh University with hands-on experience in LAN/WAN design, server virtualization, and cloud infrastructure. Delivered a fully operational 25-workstation network and a 30%-faster cloud web stack. Seeking a Network/Systems Intern role to deepen expertise in enterprise infrastructure and security.

TECHNICAL SKILLS

- Networking: LAN/WLAN design, Router & Switch configuration (Cisco), TCP/IP, DHCP, DNS, VPN (Site-to-Site, Client-to-Site)
- System Administration: Ubuntu Server, VMware vSphere/Workstation, Active Directory fundamentals
- Cloud & Web Servers: Apache, Nginx, MySQL on cloud platforms; Gzip & cache optimization
- Programming & Automation: Python (scripting/automation), C++, Java
- Tools: Packet Tracer, GNS3, Wireshark, Linux CLI

PROJECTS

Network Room Design — 25-PC Gaming Center | 2024

- Architected full network topology including switches, routers, and dedicated server to support 25 simultaneous workstations with <5ms average latency
- Deployed DHCP server to automate IP allocation across all nodes, eliminating manual configuration overhead
- Implemented Site-to-Site VPN for encrypted remote management, achieving zero unauthorized-access incidents post-deployment
- Delivered centralized network management dashboard enabling single-point monitoring and fault isolation

Virtual Computing Infrastructure Deployment | 2025

- Simulated enterprise web application lifecycle on cloud infrastructure using VMware virtualization (Apache + Nginx + MySQL stack)
- Optimized web server performance via Gzip compression and aggressive cache tuning, achieving 30% reduction in page load time
- Administered Linux server security policies including firewall rules and access control configurations

ESP32-CAM Smart Security System (Solo Project) | 2025

Lead IoT Developer

- Built multi-layer security system: RFID auth, keypad entry, real-time JPEG capture, and 3-cloud alert pipeline — response time under 5 seconds
- Engineered modular C++ firmware (13 independent modules); reduced debug cycles by ~40%
- Implemented 4-state FSM (READY→ARMED→ALARM→LOCKED), Firebase HTTPS sync with SPIFFS fallback (zero data loss), Telegram remote control (/arm, /disarm, /photo)
- Delivered HTTP admin dashboard (port 80) for RFID whitelist management and live video stream — zero physical access required

EDUCATION

Bachelor of Information Technology | Expected 2026

Nguyen Tat Thanh University, Ho Chi Minh City

- GPA: 3.22 / 4.0
- Grade A — Network Systems; Grade A — Cloud Technology; Grade A — IOT

CORE COMPETENCIES

Problem-solving under pressure • Teamwork & cross-functional collaboration • Self-directed learning • Time & priority management
